1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, drawn to a marking method capable of forming a diffraction pattern capable of diffracting a visible light wherein the laser via a change in refractive index, classified in class 430, subclass 290.
 - II. Claims 6-7, drawn to a marking method with steps of setting the nature of one laser beam by setting up relationships via pre-testing in the object then converging a laser beam on the marking object to form a characteristic-changed area, classified in class 430, subclass 30.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination of invention I is not required have process steps which wherein relationships between NA and energy pulse are obtained to determine the NA and energy per pulse for marking the object with converging laser beam. The subcombination has separate utility such as marking objects in the infrared or ultraviolet range of light instead of the visible. The characteristic change area of Group II does not have to produce a change in refractive index but instead could be a latent change such that a further processing step is

required to obtain any discernable difference in the characteristic change area in such a medium as that set forth by Parthenopolus et al (Science).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Mr. Kevin Turner on July 14, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
